

Plategum S1

Protection gum suitable to all types of lithographic plates

It is a gum for use in plates processors, for the protection of all types of lithographic plates during storage periods prior to re-printing, due to its efficient protective stability during extended periods of time.

Properties

- ✓ *Excellent plate protection.*
- ✓ *It has a very good wetting characteristic.*
- ✓ *It is easily cleaned-out without leaving residues.*
- ✓ *The plates image areas are kept ink-receptive.*
- ✓ *Permanent elasticity. It doesn't crack nor detaches itself from the plates' surface.*
- ✓ *Slightly mild pH, adequate to the oxide layer.*
- ✓ *Nonaggressive to the plate's aluminium oxide, nor its emulsion layer.*
- ✓ *Valid for application via the processor or manually.*
- ✓ *It contains corrosion inhibitors*

User Instructions

It is supplied ready to use, in automatic plates processors, immersion trays and manually.

Plate's processors application: Use it directly, or diluted 1:1 with water.

When used manually, extend it over the plate's surface, as evenly as possible, to avoid any possible excessive accumulation over the printing area

Recommendations

- *Avoid gum buildup in image areas.*
- *Periodic cleaning on the applicator gum is advisable.*
- *Clean the gum tank if it will not used for periods longer than week.*
